

New Requirements for Phased Array Inspectors

The 2011 issue of ASNT document SNT-TC-1A has directly addressed the training, qualification and certification requirements for UT Phased Array inspectors.

The new recommendations require a total of 80 hours of formal training.

TEST NDT has revised its course manuals to reflect these new requirements and now offer two, 40 hour courses for Level I and Level II, UT Phased Array Inspectors to meet this.

The first course is our Level I course of 40 hours. This covers History of Phased Array, Digitization, Phased Array principles, Phased Array applications, basic programming and process control requirements.

The second week will go much deeper into application specific programming and optimisation techniques along with advanced OminScan functions and file manipulation principles.

Inspectors who have already taken the original 40 hour courses **at TEST NDT** have the option of taking the second week only, to achieve the required training hours and curriculum.

Qualification examinations may also be taken on completion of the training packages in accordance with SNT-TC-1A (2011) and your company "Written Practice".

The new dates are:

Ultrasonic Phased Array Level I

Ultrasonic Phased Array Level II

Feb 11-15, June 3-7, Aug 19-23, Nov 11-15

Feb 18-22, June 10-14, Aug 26-30, Nov 18-22

TEST NDT LLC 193 VIKING AVENUE BREA, CA 92821
